EXPERIENCE

Full-Stack Software Engineer Intern | GoFundMe

May 2026 — Aug 2026

- Led intern engineering team in designing and implementing an end-to-end Leaderboard Share Assets feature for GoFundMe Peer-to-Peer fundraisers, generating personalized share images across 4 formats and 5 leaderboard states for 20 variants.
- Implemented full-stack functionality across NestJS, GraphQL, and React/TypeScript, integrating leaderboard data, eligibility logic, Redis caching, dynamic poster rendering, fallback behavior, and feature-gated sharing across 30+ existing poster share surfaces. Accelerated development with Claude Code and Figma MCP.
- Owned end-to-end project execution from initial scoping through validation and staging rollout, breaking the feature into implementation milestones and 20+ tickets, coordinating cross-team dependencies across multiple shared production services, documenting architecture and edge cases, and orchestrating manual testing.
- Built OpenTelemetry observability and Coralogix dashboard tracking 3,000+ poster renders, p50/p95/p99 latency, cache performance, fallback rates, failures, and feature funnel metrics for staged release.

Software & Data Intern | MKS Instruments

Oct 2023 — Sep 2024

- Developed Python web scrapers using Selenium, BeautifulSoup, and Pandas to automate competitor pricing research across manufacturers, navigating dynamic webpages, pagination, and site-specific structures to collect product catalogs.
- Automated weekly pricing analysis by consolidating scraped data into standardized spreadsheets with historical price comparisons, collecting thousands of competitor products in ~5–20 minutes instead of manually checking individual products.

PROJECTS

GameScript | [Live](#) | [GitHub](#)

Nov 2025 — Jan 2026

SvelteKit, TypeScript, Go, Fiber, PostgreSQL, ESPN API, Vercel, Render, Supabase

- Built a full-stack NFL/NBA season simulation platform with SvelteKit, Go, and PostgreSQL, implementing league-specific standings, tiebreakers, playoff seeding, and bracket logic that dynamically updates as users simulate game outcomes.
- Integrated ESPN data via REST APIs and automated background jobs, implementing user authentication, scenario persistence, and optimized database queries across Vercel, Render, and Supabase.

NFL Mock Draft Simulator | [Live](#) | [GitHub](#)

Apr 2025 — Jul 2025

React, JavaScript, Python, FastAPI, PostgreSQL, SQLAlchemy, Netlify, Render, Supabase

- Built a full-stack NFL Draft simulator with React, FastAPI, and PostgreSQL, modeling teams, players, draft picks, rosters, and draft state while supporting multi-team control, automated opponents, and interactive trades.
- Developed a weighted CPU drafting algorithm based on player rankings and team positional needs, and implemented draft-value calculations to evaluate trades and dynamically update draft order.

Fabflix | [Demo](#) | [GitHub](#)

Sep 2024 — Dec 2024

Java, JavaScript, MySQL, jQuery, JDBC, Docker, Kubernetes, AWS EC2, Tomcat, JMeter

- Developed a Java Servlets/MySQL movie e-commerce application managing 15,000+ movies and 60,000+ actors, implementing full-text search, autocomplete, pagination, secure database access, shopping carts, and administrative tools.
- Containerized and deployed the application with Docker and Kubernetes on AWS EC2, using JDBC connection pooling and JMeter load testing to scale pod deployment and increase measured throughput from ~350 to ~4,000 requests/minute.

EDUCATION

University of California, Irvine

2021 — 2025

B.S. Computer Science — Specialization: Intelligent Systems

- **Relevant Coursework:** Data Structures & Algorithms, Artificial Intelligence, Machine Learning & Data Mining, Database Management, Software Engineering, Operating Systems, System Design, Information Retrieval

CERTIFICATIONS

AWS Certified Solutions Architect — Associate (SAA-C03) | Amazon Web Services

Mar 2026

SKILLS

Languages: Python, JavaScript, TypeScript, Java, Go, C/C++, SQL, HTML/CSS

Frameworks & Libraries: React, Node.js, Next.js, SvelteKit, Tailwind CSS, FastAPI, NestJS, GraphQL, Pandas, Scikit-learn

Tools & Platforms: PostgreSQL, MySQL, Git, Docker, Kubernetes, AWS, Coralogix, Supabase, Vercel, Render
